

Class Cancellations — Guide

VTMS - vCrop Technologies

This guide explains the two cancellation types, who can send and manage them, how advance notice is measured and why it matters for billing, and exactly what a teacher sees on their own attendance form once a cancellation is sent.

Who can do what

Role	Send cancellation	Edit / Delete	View
Head Teacher	Yes	No	Own schools
Org Admin	Yes	No	Own organization
vCrop Admin	Yes	Yes — the only role that can	Everything
Cluster Coordinator	No — notified only	No	None — cannot open this screen at all (redirected to Dashboard)
Teacher	No	No	Own records only

Two cancellation types

Type	Use when...	Fields
All Classes Cancelled (date range)	The whole school day is off for one or more teachers — a holiday, an event, a closure spanning one or more dates.	School, one or more teachers (checkbox list or "All teachers"), from/to date, and a single school start time used to measure notice for every day in the range.
Particular class (specific)	Only one class/section for one teacher on one date is cancelled — everything else that day goes ahead normally.	School, teacher, subject, class, section, exact scheduled date and time.

Only Head Teacher, Org Admin and vCrop Admin can send a cancellation. Cluster Coordinator is notified automatically whenever one is sent for their school, but the Cancellations screen itself is not in their menu at all — they cannot open it to browse the list. Teachers only ever see their own records.

What happens when you send one

The affected teacher(s), the school's Cluster Coordinator (if assigned), Org Admin and vCrop Admin are all notified immediately. On the teacher's own Mark Attendance form, if the date (and for a specific cancellation, the exact class/section) matches, Class status is auto-locked to Cancelled with a red explanation note — the teacher

doesn't get a choice on that row, so make sure the details you enter are correct before sending.

Overlap handling for date ranges

If part of a newly requested range is already covered by an earlier cancellation for that same teacher at that school, only the genuinely new, not-yet-covered days are sent as a fresh record — the rest is silently skipped rather than duplicated. If a teacher's entire requested range turns out to already be fully covered, that teacher is skipped entirely and the confirmation message names exactly who. If every selected teacher is already fully covered, nothing is sent at all.

Advance notice — how it's measured and why it matters

Advance notice is the time between when the cancellation notification is sent and the scheduled class time. This exact window also drives billing: under 24 hours' notice (including a "late" notice sent after the scheduled time already passed) means the class stays billable to the Organization, since the teacher had no real chance to be reassigned. 24 hours or more means it is not billed.

Timing	Shown as	Billing effect
Notified after the scheduled time already passed	Late (red)	Billable — shortest possible notice
Less than 1 hour before	Very short (red)	Billable
1–23 hours 59 minutes before	Amber	Billable (under 24h)
24 hours or more before	Green	Not billable — fair warning was given

Editing and deleting — what's allowed

Type	Edit	Delete
Specific	Yes — subject, class, section, date, time (vCrop Admin only). Teachers already notified are not re-notified of the edit.	Yes (vCrop Admin only)
Date range	No — a single request can create separate records per teacher to account for existing overlaps, so editing one in place could desync the others. Delete and ask the Head Teacher to resend with the correct dates instead.	Yes (vCrop Admin only)

Deleting a cancellation record immediately lets the affected teacher mark attendance for that date again — only do this if the cancellation was sent in error.
