

Reports & Billing — Guide

VTMS - vCrop Technologies

This guide explains the six report tabs, who sees each one, the filters and download limits, and the exact billing bucket logic behind every number in the Consolidated (Billing) report.

The six report tabs

Tab	Who sees it	Use it for
Attendance	Everyone	Every individual attendance record, with HT Approval Status — the most granular view.
Class Cancellations	Org Admin, vCrop Admin	Every cancellation sent, with advance notice timing.
Allocated Teachers	Org Admin, vCrop Admin	Current snapshot of who's allocated where — no date filter, since it's "as of now."
Requirements	Org Admin, vCrop Admin	Requirement fulfillment tracking, by status.
Summary Rollups	Org Admin, vCrop Admin	Aggregated totals, either Per School or Per Teacher.
Consolidated (Billing)	Org Admin, vCrop Admin, and Teacher (own data only)	The actual billing output — Total Billable Minutes per teacher/class/subject.

Cluster Coordinator and Head Teacher only ever see the Attendance tab. Teachers additionally see Consolidated (Billing) — scoped to just their own records — for transparency into their own billing picture.

Filters available

Filter	Where it applies
Organization	vCrop Admin only, and only shown when there's more than one organization.
School	Any role with more than one school in scope.
Subject	Every tab.
Status	Attendance (Fully Approved / Pending / Rejected), Requirements (full status list), Allocations (Active / De-allocated) — each tab has its own options.
Billing month	Consolidated (Billing) only — a quick alternative to picking a custom date range.
From / To date	Every tab except Allocated Teachers (a current-state snapshot has no date dimension).

On the Consolidated tab, if both a Billing month and a custom From/To range are set, the date range always takes priority over the billing month.

Download limits

Role	Maximum download range
Org Admin, vCrop Admin	92 days (about one quarter)
Everyone else (Teacher, CC, Head Teacher)	31 days (about one month)

This cap exists purely to avoid overloading the server on a single export — it applies to Attendance, Class Cancellations, Summary Rollups, and Consolidated (when using a custom date range). Allocated Teachers has no date filter at all, so the cap doesn't apply there.

What makes a class billable — the full logic

Class / day status	Condition	Result
Conducted	Head Teacher has approved	Billable — Approved bucket
Conducted	Not yet approved (pending or rejected)	Not yet billable — Un-Approved bucket (reference only)
Not Conducted (teacher end)	Always, regardless of anything else	Never billable — this is always the teacher's own reason, not the school's
Cancelled / All Classes Cancelled	No formal Class Cancellation record exists	Billable — Unrecorded Cancellation bucket, regardless of approval status
Cancelled / All Classes Cancelled	Formal record exists, notice under 24 hours (or late)	Billable — Short-Notice Cancelled bucket
Cancelled / All Classes Cancelled	Formal record exists, notice 24 hours or more	Not billable — fair warning was given
School Holiday / On Leave	Always	Never billable

The Consolidated report columns

Column	Meaning
Approved Min.	Conducted classes that Head Teacher has approved.
Short-Notice Cancelled Min.	Formal cancellation record, notice under 24 hours — billable.
Unrecorded Cancellation Min.	Cancelled / All Classes Cancelled with no formal record at all — billable regardless of approval status.
Total Billable Min.	Approved + Short-Notice Cancelled + Unrecorded Cancellation — every billable minute, traceable to its source.
Un-Approved Min.	Conducted classes not yet approved by Head Teacher — shown for reference only, not yet billable.

Hover any Short-Notice or Unrecorded cell in the on-screen table to see exactly which dates contribute to that number. The Session (e.g. "2026-27") and Month/Year are derived automatically from an April–March academic year.
