

Users & Role Management — Guide

VTMS - vCrop Technologies

This guide explains who can create which logins, what each role requires, what syncs automatically, and how Enable/Disable and Reset password work.

Only vCrop Admin can even open this screen

The Users screen does not appear in the menu for anyone else — not even Org Admin. It manages logins for Org Admin, Cluster Coordinator and Head Teacher only.

Teacher accounts are created from the separate Teachers screen's "Add teacher" button, not here. vCrop Admin's own account is not creatable or manageable from any screen — it cannot be disabled, and has no action buttons on its own row.

The role hierarchy

vCrop Admin (everything, everywhere) → Org Admin (one organization) → Cluster Coordinator (several schools) → Head Teacher (one or more schools) → Teacher (their own allocations only).

Fields required, by role

Role	Organization	School(s)
Org Admin	Required	Optional — single school if set at all
Cluster Coordinator	Required	Required — checkbox list, at least one, can select several
Head Teacher	Required	Required — checkbox list, at least one, can select several

If you pick a school that already has someone assigned to that same role, the school's name shows an amber "(assigned: Name)" tag right in the checklist — VTMS still lets you proceed, but you will likely want to remove the old assignment via "Manage schools" afterward to avoid two people holding the same role at one school.

What happens automatically on creation

Role created	Auto-synced
Org Admin	That organization's Org Admin pointer is set to this new user.
Head Teacher	The (first) selected school's Head Teacher pointer is set to this new user.
Cluster Coordinator	No automatic pointer sync — Cluster Coordinators are not referenced by a single-value pointer.

Every new user also gets a forced password change flag — they must set their own new password the very first time they log in with the one you gave them.

Managing schools after creation

Cluster Coordinator and Head Teacher accounts get a "Manage schools" button instead of a plain school cell — add or remove one school at a time. Removing or adding a Head Teacher's school keeps that school's Head Teacher pointer in sync automatically.

Enable / Disable and Reset password

Action	What it does
Disable	Blocks that user from logging in at all, immediately — does not delete anything, fully reversible with Enable.
Reset password	You set a brand-new password directly and share it with the user yourself — VTMS does not email a reset link. Forces a password change at their next login, and automatically resolves any pending "Forgot password" request they had submitted.

When a user clicks "Forgot password?" on the login screen, it does not reset anything by itself — it just raises a request that shows up for vCrop Admin under Notifications → Password resets, waiting for an actual Reset password action here (or on the Teachers screen, for a teacher account).
